

PRODUCTS FACT SHEET

Exsurco Medical, Inc. is a leading-edge equipment manufacturer for tissue bank applications, committed to improving excision science by providing instruments for tissue processing that make life easier for technicians and clinicians. This innovative and proprietary design is critical in helping to improve the skin recovery process in tissue banks and the yield of skin recovered, which provides the availability of additional grafts for patients.

Making Life Easier for Technicians

Built upon a legacy of revolutionary tissue bank donor grafting solutions, Exsurco has developed a strong network among tissue banks nationwide by partnering with them to produce more life-saving skin grafts, increase efficiency and reduce costs.

amalgatome | MD

SKIN RECOVERY DEVICE

Designed specifically with tissue banks in mind, the rotary design allows technicians to maneuver over body contours and hard-to-reach areas that are challenging for standard dermatomes. The precision-engineered Amalgatome[®] MD:

- Is ideal for recovering cadaveric skin grafts up to 4" wide
- Adjusts easily in .001" increments for consistent skin grafts
- Means less fatigue and more comfort for users
- Requires minimal preventative maintenance
- Automatically shuts off when not in use
- Preserves the blade edge throughout an entire tissue recovery with proprietary Edge-Retention Technology[®]

SKIN DEBRIDEMENT DEVICE

Producing high-quality, full-thickness skin grafts requires skill, practice and patience. Developed specifically for tissue processing, the Amalgatome® SK simplifies debriding procedures and decreases adipose removal time compared to conventional methods with its:

- Unique circular blade cutting through adhered tissue quickly and precisely
- Ergonomic design requiring minimal force to operate
- Wide-cutting blade surface providing clean, smooth, uniform tissue removal
- Available in sterile and non-sterile versions
- Securely packaged for operator handling

DermaSharp®

REPLACEMENT BLADES

Compared to standard dermatome blades, DermaSharp blades are 30% sharper, remain 3 times sharper after use, and are ground and honed to a finer, sharper edge. Precision-engineered DermaSharp blades are:

- Designed with Edge-Retention Technology to preserve the blade edge during recoveries, resulting in fewer blade changes
- Made with premium hardened, surgical stainless steel
- Manufactured to exact specifications for use in popular competitor dermatome models
- Sterile-packed for tissue recovery settings
- Securely packaged for safe operator handling
