

from innovation, hope

Our mission at Exsurco® Medical, Inc. is to redefine excision science across the continuum of care through delivery and advancements in clinical solutions, strategic healthcare partnerships, and strong customer knowledge.

We are committed to improving patient lives and outcomes by advancing innovation, product development, and the marketing of medical devices for healthcare professionals in the surgical and tissue bank markets.

Exsurco Medical's highly skilled and dedicated team works diligently to provide our customers with exceptional products and service. From our vertically integrated production facility with a dedicated Class 7 cleanroom to our highly-trained sales professionals, our focus is on serving the tissue bank, tissue processing, and surgical communities.

## our commitment

We are a proud corporate sponsor of Donate Life America, a non-profit organization committed to saving and healing lives through increased organ, eye, and tissue donation. We support efforts to spread the word about the importance of tissue, organ, and eye donation, and join with other companies and volunteers across the country to emphasize the importance of tissue and organ donation.

## our clean room

Our clean room provides a controlled environment with a low level of environmental pollutants. As a medical device manufacturer, it's required for packaging products prior to sterilization with intended use in an aseptic environment, such as operating rooms and tissue recovery centers.

Currently classified as ISO Class 7, it's adaptable for re-classification to allow for future product developments requiring the use of higher level clean room controls.

## our products

Committed to healing through excision science, we remain driven to improve and simplify procedures. That's led to breakthrough products used for tissue processing and recovery of allograft skin for cadaveric use, and surgical products for wound debridement and skin grafting.

amalgatome | **SD**

One device for both efficient wound debridement and skin grafting, especially trauma and burn patients, in a surgical setting.

amalgatome | **MD**

Provides uniform, consistent allograft skin grafts resulting in higher yields, increased productivity, and improved efficiencies.

*(For cadaveric use only)*

amalgatome | **SK**

Advanced ergonomics provide technician comfort while delivering an efficient solution for adipose tissue removal from full-thickness skin grafts.

*(For cadaveric use only)*
